Dear Hiring Team,

I am writing to express my interest in opportunities related to Artificial Intelligence, Machine Learning, and backend software development within your team.

My experience combines AI engineering, Natural Language Processing, and backend development, with a strong focus on building real-world applications that integrate machine learning models into scalable systems. I am particularly interested in projects where AI is applied to solve practical problems and where collaboration between software, data, and AI teams plays a key role.

Currently, I work as an AI Backend Developer on SCRIBAL, a real-time multilingual transcription and translation platform developed with Python and FastAPI. My work includes backend API development, integration of speech recognition models such as Whisper, real-time audio processing using WebRTC and WebSockets, database design with SQLAlchemy and MySQL, and deployment of services in cloud environments using virtual machines and remote infrastructure.

In addition, I have participated in NLP and deep learning research projects focused on hate speech detection using Transformer-based models and LLMs. Through these experiences, I have developed strong skills in Python, machine learning workflows, data processing, and AI system integration.

I consider myself a proactive and adaptable person with a strong interest in learning and contributing to technically challenging environments. I enjoy working on multidisciplinary projects where AI solutions can generate real impact and improve existing processes and systems.

I am currently open to new opportunities in Madrid, particularly in roles related to AI engineering, machine learning, backend systems, and data-driven technologies.

Thank you for your time and consideration.

Kind regards,

Javier Román Pásaro
